- The UK's status as a safe haven remains for now and keeps Gilt yields suppressed.
- Conventional monetary policy has become largely redundant; the Bank of England and the US Federal Reserve have signalled their respective official interest rates will be on hold through to the end of 2012. We think that it could be 2016 before official interest rates rise.
- The Bank of England's Monetary Policy Committee has returned to unconventional monetary policy and embarked on a further round of Quantitative Easing. There will be more to come.

Underlying Assumptions:

- Stress in financial markets continued to build. Rates within Interbank markets (where banks fund the majority of their day to day operations) continue to climb. This dynamic was a feature of the banking crisis that occurred in 2008 and whilst the authorities have flooded the markets with liquidity still provides a key barometer of rising risk within markets.

- The MPC's decision to embark on a further £75 billion of QE – which the Minutes showed was unanimously supported – is likely to be expanded in the coming months as some members of the MPC had voted for £100bn of QE.
- Inflation moderated back to 5% from what is considered to be its peak of 5.2% reached in October. The Bank of England expects domestic inflation to subside markedly in 2012 as the twin effects of the VAT increase and surge in oil prices fall out of the twelve month series.
- Economic growth meanwhile remains largely illusive not helped by the considerable uncertainty and expansion of risks presented by the crisis in the Eurozone. Even if a credible and effective policy is implemented, the scale of the problems means that there is likely to be a prolonged period of subdued growth within the euro area. A failure to meet the challenges would almost certainly have significant implications for the global economy.
- Recent data and surveys suggest that the UK economy has lost the admittedly fragile momentum since the summer. Business and consumer surveys point to continued weakness in coming months and the situation in the euro area is likely to further undermine confidence and lead to tighter credit conditions for households and firms.

Against this uncertain backdrop the ability of the economy (government, companies and individual consumers) to accommodate an increase in the cost of money through higher interest rates – in the absence of a deterioration in the high credit standing that the UK enjoys – remains unlikely. In fact, we believe that it is highly unlikely.
